Editor's Preface	<i>xi</i>
Author's Preface	<i>xiii</i>
Introduction	1
References	25
Chapter I. Phenomenological theory of effects in thermoelectricity	33
1. Generalisations of thermodynamic theory of effects in thermoelectricity	33
1.1. Fundamental relations	33
1.2. General properties and relations between kinetic coefficients	36
1.3. Physical meaning of kinetic coefficients. Integral description of effects	39
1.3.1. Seebeck effect in the isotropic medium	39
1.3.2. Peltier effect in the isotropic medium	42
1.3.3. Thomson effect in the isotropic medium	45
1.3.4. Thermoelectric phenomena in the anisotropic medium	46
1.3.4.1. Longitudinal and transversal Seebeck effects	46
1.3.4.2. Peltier effect in the anisotropic medium	50
1.3.4.3. Longitudinal and transversal Thomson effects	53
1.3.4.4. Bridgman effect	54
1.3.5. Thermoelectric effects in magnetic field	56
1.3.5.1. Galvanothermomagnetic effects in the gyrotropic medium	56
1.3.5.1.1. Ettingshausen effect	57
1.3.5.1.2. Nernst effect	60
1.3.5.1.3. Longitudinal galvanothermomagnetic effect	62
1.3.5.2. Thermomagnetic effects in the isotropic medium	62
1.3.5.2.1. Transversal Nernst-Ettingshausen effect	63
1.3.5.2.2. Longitudinal Nernst-Ettingshausen effect	65
1.3.5.2.3. Righi-Leduc effect	67
1.3.5.2.4. Maggi-Righi-Leduc effect	68
1.3.5.2.5. Effects in a magnetic field parallel to temperature gradient	70
1.4. Fundamental relations of thermoelectricity. First and second Thomson relations	71

1.5. New form of the first Thomson relation	72
2. Classification: means for complete description of effects	77
2.1. Development of classification principles.	
Local description of effects	77
2.2. Distinctive features of effects - classification symbols	83
2.3. Phenomena in the zero magnetic field	91
2.3.1. Voltaic phenomena at $B = 0$	91
2.3.1.1. Electric resistance.	91
2.3.1.2. The Seebeck effect	91
2.3.2. Thermogradient effects at $B = 0$	92
2.3.2.1. Thermal resistance	92
2.3.2.2. Thermoelectric thermogradient phenomena	93
2.3.3. Caloric thermoelectric phenomena	94
2.4. Thermomagnetic phenomena	94
2.4.1. Voltaic thermomagnetic phenomena.	94
2.4.2. Thermogradient thermomagnetic phenomena	95
2.4.2.1. Odd $\Delta\tau_q^-$ effects	97
2.4.2.2. Even $\Delta\tau_q^+$ effects	98
2.5. Galvanothermomagnetic phenomena	101
2.5.1. Voltaic galvanothermomagnetic phenomena.	101
2.5.2. Thermogradient phenomena	103
2.5.3. Caloric galvanothermomagnetic phenomena.	106
2.5.3.1. Surface caloric phenomena	106
2.5.3.2. Volumetric caloric phenomena	111
2.6. Impossible effects	115
3. New thermoelectric effects	115
3.1. New thermogradient thermomagnetic effects	116
3.2. New thermogradient galvanothermomagnetic effects.	117
3.3. New caloric surface effects	117
3.4. New caloric volumetric effects.	118
4. Most favorable conditions for observation of effects	119
References	133

Chapter II. Microscopic description of thermoelectric effects	138
1. Basic concepts of microscopic theory	138
1.1. Energy spectra	142
1.1.1. Band theory approximations	142
1.1.2. Electron filling of energy bands	150
1.1.3. Band models	154
1.2. Application of the concepts of quasi-particles	161

1.2.1.	Conduction electrons and holes	162
1.2.2.	Phonons	165
1.3.	Calculation methods of kinetic coefficients	168
1.3.1.	Kinetic Boltzmann equation. Relaxation time approximation	170
1.3.2.	Kinetic Boltzmann equation. Variational method	171
2.	Thermoelectric properties of semiconductors	172
2.1.	Electric conductivity	172
2.1.1.	General relations	172
2.1.2.	The influence of carrier concentration on electric conductivity	174
2.1.3.	The influence of the effective mass of carriers on the electric conductivity	175
2.1.4.	The influence of the relaxation mechanisms on the electric conductivity	176
2.2.	Thermal conductivity	177
2.3.	ThermoEMF	183
2.3.1.	Mechanisms of thermoEMF occurrence	
2.3.1.1.	Diffusion mechanisms	184
2.3.1.2.	Phonon drag	187
2.3.1.3.	Mechanisms of occurrence of the anisotropy in thermoEMF	188
2.4.	Thermoelectric effects in magnetic field	191
3.	Thermoelectric properties of metals and metal alloys	197
3.1.	Specific features of thermoelectric properties of metals	197
3.2.	Diffusion thermoEMF	198
3.3.	Other mechanisms of thermoEMF occurrence	200
3.4.	ThermoEMF of alloys	202
4.	Thermoelectric properties of amorphous materials	203
5.	Thermoelectric properties of organic semiconductors	206
6.	Microscopic theory of the non-linear and non-local thermoelectric phenomena	210
7.	Thermoelectric phenomena in the superconducting state	216
8.	Thermoelectric phenomena in artificial media: quantum wells and superlattices	219
	References	222
Chapter III.	Thermoelectric eddy currents	232
1.	Theory of thermoelectric eddy currents	232

1.1. Conditions for the occurrence of thermoelectric eddy currents	232
1.2. Methods of calculating the thermoelectric eddy currents	237
1.2.1. Scalar potential method	237
1.2.2. Vector potential method	238
1.3. Thermoelectric eddy currents in a homogeneous anisotropic medium	240
1.4. Thermoelectric eddy currents in two-layer media	243
1.5. Thermoelectric eddy currents in inhomogeneous media	245
2. Experimental observation of eddy thermoelectric currents	251
3. Control of spatial configuration of eddy thermoelectric currents	254
3.1. Reverse thermoelectricity problems	255
3.2. The structure of solutions of the reverse thermoelectricity problems	258
3.2.1. Control of eddy thermoelectric currents in the isotropic medium	258
3.2.2. Control of eddy thermoelectric currents in the gyrotropic medium	261
3.2.3. Control of thermoelectric eddy currents in the anisotropic medium	262
4. Thermoelectric eddy currents of specified configurations	264
4.1. Circular thermoelectric eddy currents	264
4.2. Spiral thermoelectric eddy currents	266
4.3. Thermoelectric current lines of varying shape in a domain	268
4.4. Periodic in space configurations of thermoelectric eddy currents	272
5. Generalisation of the law of electromagnetic induction. Nonstationary eddy thermoelectric currents	274
References	283
Chapter IV. Thermoelectric energy conversion	288
1. Generalised approach in the description of energy conversion processes	288
1.1. Eddy currents as a means for the description of energy conversion	288

1.2. Classification of media and fields leading to thermoelectric energy conversion	292
1.3. Method of discovery of new thermoelement types	298
1.3.1. Anisotropic thermoelectric converters with circular eddy currents	300
1.3.2. Description of the known thermoelement types by the method of thermoelectric eddy currents	308
1.3.2.1. Thermocouple as an object for searching for a thermoelectric converter by the method of eddy thermoelectric current	309
1.3.2.2. Justi thermoelement for searching for a thermoelectric converter by the method of thermoelectric eddy current	312
1.3.2.3. One more example of searching for a thermoelectric converter that results, in particular, in the anisotropic thermoelement with the transversal thermoEMF	317
2. Perpetuum mobile in thermoelectricity	321
3. Figure of merit of thermoelectric energy conversion	327
3.1. The efficiency of thermoelectric conversion in steady state	331
3.2. Peculiarities of thermal-to-electric energy conversion in non steady state	335
References	338

Chapter V. Thermoelectric information transformation	342
1. Relationship between information and energy	345
2. The development in information theory for the description of measurement process	351
3. Conventional description methods for thermoelectric measuring devices	353
4. Parameter of informability	356
References	367
Conclusions	369
List of basic notations	372
